Electron/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-29, drawn to methods of generating a probability matrix of protein structures, classified in class 702, subclass 27.
- II. Claims 30-37, drawn to methods to optimize simulation or scoring function parameters, classified in class 703, subclass 2.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the methods are directed to different results and recite different method steps requiring different searches.

These inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, therefore restriction for examination purposes as indicated is proper. In addition, because these inventions are distinct for the reasons given above and the search required for either Group is not required for the other Group as set forth above, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention as set forth below.

Specie A: applicant must elect ONE of the optimization procedures recited in any of claims 5, 13;

Specie B: applicant must elect a protein backbone structure taken from a (single) protein; e.g. as recited in claims 6, 20, and 28 OR a protein backbone structure comprising an

Art Unit: 1631

ensemble of protein backbone structures; e.g. as recited in claims 9 and 21. If an ensemble is elected, then applicant must further elect ONE of the generation "simulations" recited in claims 16, 17, 22, and 23.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from Specie A *and* from Specie B for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-4, 7-8, 19, 24-27, and 29 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Sequence Rules

This application contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2).

However, this application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth below or on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence

Disclosures. Figure 8 contains sequences subject to the Sequence Rules (unbranched chain of 4 or more amino acids). Applicant is advised that ALL sequences disclosed in an application are subject to the Sequence Rules. As set forth in MPEP 2421.02:

"The rules apply to all sequences in a given application, whether claimed or not. All such sequences are relevant for the purposes of building a comprehensive database and properly assessing prior art. It is therefore essential that all sequences, whether only disclosed or also claimed, be included in the database.

Applicant is given ONE MONTH, or THIRTY DAYS, whichever is longer, from the mailing date of this letter within which to comply with the sequence rules, 37 CFR 1.821 - 1.825. This time period will run concurrently with the time period for response to the restriction/election requirement set forth above. Any reply to the restriction/election requirement received before the Sequence Rules have been complied with will be considered nonresponsive. Failure to comply with these requirements will result in ABANDONMENT of the application under 37 CFR 1.821(g). Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a). In no case may an applicant extend the period for reply beyond the SIX MONTH statutory period. Direct the reply to the undersigned. Applicant is requested to return a copy of the attached Notice to Comply with the reply.

Art Unit: 1631

Conclusion

Claims 1-37 are restricted and are subject to an election requirement. Sequence Rules must be complied with.
